

medical magnesium

medical magnesium develops metallic bioresorbable implants for orthopedic and trauma surgical therapy. A second operation to remove the implants is not necessary. Based on the technology platform mm.X our implants are already available for clinical use. At the Aachen site, the team is working towards the goal of providing surgeons with highly functional resorbable implants to further improve surgical patient care.

We are looking for you to strengthen our team as

Intern (w/m/d) Business Development

// Your tasks

- Market analysis of the global orthopedic implant market
- Portfolio analysis of potential commercial partners
- Develop market entry and reimbursement strategies for our mm.X implant portfolio
- Learn and implement the concept of *value-based health care*
- Conduct expert interviews to derive pricing strategies
- Independently build and advance our operative business processes

// Your profile

- Student of Industrial Engineering, Economics, Entrepreneurship or similar (at least 4th semester)
- Passion for innovation, technology and drive for discovering new approaches
- Pragmatism and ability to work independently (ownership)
- Enthusiasm at work and flexibility to master challenges
- Fluent in English and German (written and verbal)

Apply with your CV, 3 sentences about you and your motivation to join our team and your availability (at least 3 months)
